El APK es un formato que manejan con cierta frecuencia en Android, especialmente si descargas aplicaciones de tiendas alternativas a la Play Store. Pese a que usemos tiendas que son conocidas y seguras, el riesgo al trabajar con este formato es mayor que si descargamos aplicaciones de una manera normal en el teléfono. Es frecuente que se cuele algún virus en el teléfono de esta manera. Por eso, se hace necesario el poder comprobar la veracidad y seguridad de este APK antes de que lo instalemos en el teléfono. Para ello, podemos recurrir a algunas herramientas que nos ayuden a verificar si tenemos algún virus o malware, evitando así problemas en nuestro teléfono Android. Virus Total: Verifica un APK antes de descargarlo. Virus Total es una de las opciones más conocidas para comprobar si un APK está libre de virus o amenazas, antes de que lo instalemos en el teléfono. Es una plataforma fiable, que funciona usando una base de datos de más de 70 antivirus diferentes, que es lo que permite que no haya virus, malware o amenaza que se les escape. Esto nos dirá si es seguro instalar este archivo o no. El funcionamiento de Virus Total es ademáis muy sencillo, porque no tendremos que instalar nada en nuestro teléfono. Se puede usar desde el propio navegador, ya sea en el teléfono o en el ordenador. Así que podrás comprobar si este APK que deseas es seguro o no. Los pasos para usarlo son: Abre la página de Virus Total en el navegador. Pulsa en la pestaña de archivo. Sube el APK en cuestión. Pulsa en analizar. Espera a que Virus Total complete su análisis. El análisis tarda poco tiempo, en menos de un minuto suele estar claro normalmente. Nos dirá entonces si este APK que deseamos instalar en el teléfono es seguro o no. Hay que considerar que son varios los antivirus que usan, por lo que puede darse el caso de que un antivirus sí que lo marque como peligroso y el resto no. Puede o bien ser un falso positivo o que solo dicho antivirus haya sido capaz de detectar esa amenaza. Podemos ver siempre el listado completo de los antivirus y el resultado que se ha obtenido en este test, para que veamos cuál es el que detecta, si es que pasa, esa amenaza. APK Pure Otra herramienta muy conocida, que en más de una ocasión hemos usado, es APK Pure. Esta plataforma nos puede decir si el archivo en cuestión es falso, ya que puede pasar que estemos descargando algo que se hace pasar por la aplicación que realmente queremos instalar. Esto sirve como una manera de detectar amenazas e intuir que hay un virus o malware. Por lo que es otra opción que podemos usar en estos casos de manera sencilla. La forma de usarla es muy simple: Entra en la web de Apk Pure. Sube tu aplicación en la página (El peso máximo admitido es de 100 MB). Pulsa en analizar. Espera a que realice el análisis. APK Pure te dirá si la firma de la aplicación coincide con la de su desarrollador original. Si hemos subido una aplicación a la web, y se muestra que el desarrollador no coincide con el original que ha creado dicha app, es motivo para sospechar de que ha sido modificada y de que hay algo que no va bien con esta aplicación. Un síntoma habitual de que hay algún virus o malware en la misma, por lo que no deberíamos instalarla en Android. APK Pure es otro buen método al que recurrir si tenemos dudas sobre el origen de este archivo. Nos informará de una manera sencilla y muy rápida sobre su origen, si se ha modificado o no, para que así podamos evitar instalarlo en caso de que no sea fiable. Además, como habéis podido comprobar, es muy fácil de usar. Sigue los temas que te interesan Cinema HD has been the most popular media streaming app to many jailbroken Firestick users for a long time now. The Android-based software allows users to fetch links from across the web and stream or download movies and TV shows on their devices locally. It is considered one of the best Firestick apps available out there. However, glitches have begun surfacing in the app recently. That is causing inconvenience to users who have been using the app for a while now. Apart from the frequent commercials, bugs have plagued the app, which ruins the viewing experience. In this article, we'll be going through some of the apps that can replace Cinema HD APK for your streaming purposes. These alternatives will enable you to stream your favorite content via devices such as Android TVs and smartphones, Amazon Fire TV Stick, and many more. For more comprehensive lists of alternatives to Cinema HD and streaming movies, check out our other posts: Best IPTV Services Best Kodi Addons Even though Cinema HD APK is still usable, it's always a good idea to have another app as a backup. It is recommended because you never know when developers would cease to update the app, rendering it pretty much obsolete. The 10 best alternatives to Cinema HD APK are listed below. Cyberflix TV is the best replacement app for Cinema HD APK to watch free movies. It has an interactive design and a similar user interface as Cinema APK. The app offers an extensive collection of movies and TV shows ready to be streamed at high-speed servers. This app is 100% safe and secure and features no annoying ads. How cool is that? Moreover, the collection streams all the content in HD quality. Cyberflix has the unique feature of an in-built media player that offers services much like any other external player. Hence, users don't have to go through the inconvenience of installing external media players such as MX player, VLC, etc. Frequent updates cause the most recent movies and TV shows to be readily available after release. The app also supports more than 220 languages for subtitles. Cyberflix offers easy navigation across multiple platforms such as Android-based devices, Amazon Firestick/Fire TV, Kindle, Nvidia Shield TV, etc. Morph TV has a tremendous collection of movies and shows which are updated regularly. All latest releases are available in the app in HD up to 1080P and even 4K. The most unique feature of Morph TV is that the app content is sourced only from top-quality providers. Hence, users can rest assured that the best content is available in the app (similar to what you will find on Cinema APK). The app comes with an internal media player that supports all kinds of video formats and in-built Chromecast support that allows users to switch the watching experience from mobiles to big screens of TVs and PCs. It even allows users to download their favorite content so that they can watch the same offline. The app also supports more than 20 languages for subtitles and includes the IMDB ratings for most of its content so that users don't have to go through the hassle of checking it online themselves. Interestingly, it is a free-to-use app and doesn't require users to sign-up or register. A user only needs to install and launch the app. Pretty simple! Being remote-friendly, Morph TV allows you to experience the app on devices. Other supported platforms include all Android-based devices, Amazon Fire TV Stick, Nvidia Shield TV, etc. The best thing about Kodi is that it's open-source and free. The software is continuously modified and upgraded by coders and developers around the globe; community members and users alike can modify the software according to their needs. The interface might be a little tricky for new users to understand, but once you get acquainted with the app, you'd understand the reason behind its popularity. The app works through plugins called addons that act as a bridge between the media player and source of media over the internet. These addons fetch links from across the web and let you stream your favorite content. Official Kodi repository provides some verified addons, but countless great unofficial addons are also available through multiple sources online. It makes Kodi an ideal streaming option because it offers numerous options through its add-on feature. Official developers update the Kodi frequently to fix bugs and released Kodi Matrix 19.3 recently. The app is compatible with most platforms, including iOS, Android, Microsoft, Linus, etc. How to Install Kodi on Firestick Best VPN for KodiCat Mouse Kodi is a Terrarium TV clone and makes available all its services and even more. It has thousands of movies and shows for online streaming in HD quality. The app uses the best scrapers available to obtain high-quality streaming links. It plays content without buffering. It is also ad-free, which allows users to watch videos without interruption. It comes with an in-built media player that supports various video formats and hundreds of languages for subtitles. Users can download the content directly into their local devices and watch it according to their convenience. CatMouse APK doesn't require users to register. They only need to download and install the app. In general, the app is legal. But it might host certain pirated content, which might necessitate the use of a VPN service. Currently, the app supports multiple platforms like Android, Amazon FireTV, Nvidia Shield TV, Amazon Kindle, etc. Sounds like a great Cinema HD alternative? Try it out by installing it on your streaming device. Titanium TV can easily replace Cinema HD APK for streaming purposes. It has a minimalist interface and is a free app that allows watching videos and movies in HD and 4K resolution. Moreover, the developer also integrates two file download methods/services; Trakt and Real Debrid. They support users to retrieve unlimited content during high-speed download and keep the resolution of the original video. As a result, they will experience the best offline movie viewing experience, with high-quality picture. Cinema HD APK is still usable, it's always a good idea to have another app as a backup.
